

Transmax MINI-6 & MIDI-10 Field Processor Longevity Statement

Transmax's supplier of field processors (FPs) has advised that an end-of-life (EOL) announcement for a component in the MINI-6 and MIDI-10 FPs is due to be issued early in 2017.

Our supplier advises that the date for last orders of the MINI-6 and MIDI-10 FP's is Q2 2017. Likewise, the last shipping date is Q4 2017.

As a result of this announcement, a replacement for these models is being investigated and:

- It is envisaged that the Transmax development cycle for the replacement is likely to start in late 2015
- Transmax expects the production version will be available in early 2017
- More information about the final specification will be available towards the end of the development cycle

Transmax's MINI-6 and MIDI-10 FPs were first introduced in 2009 and have been in continuous use since then with an estimated 2,060 MINI-6 and 400 MIDI-10 FPs in full service in the field throughout Australia.

Transmax will continue to supply the current MINI-6 and MIDI-10 units until a replacement model is available. Transmax will also continue to hold stocks of these FPs to service customer warranty claims for as long as possible.
